## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to claims 1-4, 6, 8, 10-13, 15, 17 and 19-22 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 101***

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 19-22 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Computer programs and electrical signals are non-statutory subject matter.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4, 6, 8, 10-13, 15 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Bernet.

Bernet discloses a matrix converter (fig. 1) having current commutation circuitry with bi-directional switches (Cr11, Cr21, Cr23 etc.) arranged in a configuration to begin initiation of one switch before deactivation of another switch wherein the current commutation interval is minimized and is considered to approach zero. And, a first switch and a second switch whereby, in a first mode in use, the first switch is activated and the second switch is not activated, and the current commutation circuitry means is operable to activate the second switch means before the first switch means is deactivated (e.g. fig. 5-7).
